Vendor Security Risk & Compliance Management

Security Incident / Breach Management

IT/Cyber Security Governance, Risk & Compliance Framework

Security Project Management

Application Security Framework

Security Operational Services

Security Team Assessment

Security Awareness Training Program

> HOW DOES IT ALL WORK?

Our Security Operational Services consist of a broad portfolio of security activities that are essential to security teams. Our objective is to provide hands-on support to your organization's security teams as they embark on deploying large enterprise-wide security initiatives. Examples of the most popular Security Operational Services are described below:

SECURITY RISK AND COMPLIANCE ASSESSMENT
Performing an in-depth security risk and compliance assessment will consist of multiple activities including data gathering, mapping the controls against applicable risk and compliance frameworks, scoring the risks and recommendations based on the "biggest bang for the buck" approach so you know which security investments will have the greatest impact on your budget. Every assessment Accutive performs is customized to the client, and uses appropriate industry benchmarks.

VENDOR SECURITY RISK AND COMPLIANCE MANAGEMENT
Accutive can provide an end-to-end framework to manage your organization's vendors from a security risk and compliance perspective. Accutive's framework will put in place the processes required to validate, track, and maintain the organization's relationships with vendors so you are always informed as to their security risk and compliance posture.

IT/CYBER SECURITY GOVERNANCE, RISK, AND COMPLIANCE FRAMEWORK
Accutive approaches IT/Cyber security GRC from a holistic perspective using a streamlined and pragmatic framework that has been successfully implemented with real organizations. We focus on organizations that may not be able to acquire expensive GRC solutions, but still need to implement a GRC framework across functional silos for their IT/cyber security functions.

APPLICATION SECURITY FRAMEWORK
Accutive has a strong and proven knowledge in application security due to its current in-house development work of financial and banking software. Accutive can provide on-going guidance to developers on how to incorporate security mechanisms to pro-actively detect and prevent new or existing security vulnerabilities.

SECURITY AWARENESS TRAINING PROGRAM
Accutive's security professionals have extensive hands-on experience in developing security awareness training programs from scratch as well as managing them across multiple business units in the U.S. and internationally. One of our CISOs received a CSO award for her innovative security awareness training program that, several years later, is still being used by the organization.

SECURITY TEAM ASSESSMENT
Security skills are in high demand and there is a growing shortage of security professionals, requiring requires flexibility and creativity in building a sustainable security team that has low turn-over.

Accutive can carry out a detailed evaluation and assessment of an existing information security team's experience, skills, and effectiveness such as identifying staffing, training, and education needs.

SECURITY PROJECT MANAGEMENT

Accutive can provide project managers who have specialized in information security and therefore understand the intricacies of managing project initiatives such as the deployment of security solutions and programs.

SECURITY INCIDENT/BREACH MANAGEMENT

Accutive specializes in the development and management of an organization's security incident response and notification program to ensure an organization is in a strong position to respond to a security incident or breach.

BUSINESS CONTINUITY AND DISASTER RECOVERY MANAGEMENT

Accutive can assist with the development and maintenance of an organization's business continuity (BC) and disaster recovery (DR) plans. Once BC/DR plans are developed, Accutive's practitioners can provide monthly support to maintain the BC/DR plans.

> CYBER SECURITY LIFECYCLE

At Accutive, we believe we can streamline cyber security and make it understandable to all beyond security and IT professionals. The cyber security lifecycle doesn't need complex charts and diagrams. What we do best is give you security intelligence in a clear business language.
